[Stainless Steel Security Mesh](#)

Stainless steel security mesh is woven by use of high quality stainless steel wire which is made in a special high temperature condition with drawing machine make to specified wire diameter. And then in a constant temperature, clean workshop, through the weaving machine to get the wire mesh. Then pretreatment, after this we will cut the mesh according to customized size, then powder coating black, finally get the stainless steel security mesh.

Benefits & Uses

Is it possible to keep nasty insects out of the house while maintaining privacy in the home? If you like to open doors and windows during the day or night, the stainless steel security mesh is a good choice. When you set up a black polygonal mesh, you can protect your area from insects while still maintaining privacy. Not only that, you can also maintain sufficient airflow to keep your home at a constant temperature.

For those who live in a comfortable environment, stainless steel security mesh is supplied throughout the year. In other words, if you tend to leave doors and windows open throughout the summer, you may intend to prevent transportation personnel and lawyers from seeing the inside of your house. With the right product, you can exclude insects and various other insects while protecting your privacy.

In addition, the stainless steel security mesh can still let light into your house throughout the day. You don't

have to choose between adequate lighting and privacy. A high-quality stainless steel security mesh will not darken the area in your home.
