1. A204E-1002[non-sparking putty knife](#)is made of aluminum bronze alloy.
2. The cold rolling process is adopted to improve the mechanical properties such as the strength and service life of the blade.
3. The handle is made of high-quality wood, which is strong but environmentally friendly.
4. This tool is suitable for scraping the surface, applying putty, and removing rust in an inflammable and explosive environment.
5. The product has passed FM global certification.

Product description

The non sparking putty knife is made from a combination of aluminum bronze and is cold rolled to improve the mechanical properties of the blade such as strength and longevity. The overall length, including the handle, is 8 inches and the width of the blade is 3 inches. The tool is beryllium-free and Factory Mutual Warranty (FM) certified.

Function

This tool is suitable for scraping surfaces, applying putty, and removing rust inflammable and explosive environments. The spatula blade is pressed against the surface to remove or manipulate material. The non-sparking quality ensures that when the tool comes in contact with the target, the friction of the collision will

not generate sparks.

Applications

Non-sparking putty knives are used for scraping surfaces or applying materials such as putty or plaster. This type of trowel is particularly suitable for environments involving oil and gas work, such as pipeline construction and chemical plants.
