## Acoustic Slat Wood Wall Panels

Deco Sound's [acoustic slat wood wall panels](#) offer luxury quality, state-of-the-art noise reduction wood paneling solutions. Each panel is handcrafted to not only visually transform a project, but also to create a quieter, more comfortable environment.

They fit with any design theme, from natural and earthy to sleek and contemporary. This means it not only looks and feels like solid wood but also offers you a popular rustic look.

## Acoustic Slat Wood Wall Panels Dimensions

Each panel measures 2400mm x600mm and is formed from 12mm deep and 27mm wide lamellas, with a distance of 13mm in between each. These slats are then mounted on a base of 9mm thick acoustic felt, The panel is 22mm thick in total, including the slats and the felt.

## Acoustic Slat Wood Wall Panels Application

Deco Sound's acoustic wooden slats panels for walls and ceilings can quickly transform any modern space. These slatted wood wall panels are made of veneered thin slats placed on an acoustic felt backing for durability. Easy to install on your own, slat wall panels can instantly transform your bedroom, living room or office into a sophisticated, modern space.

## Features of acoustic slat wood wall panels

---

The perfect decorative panel for all interior environments.

Acoustic slat wood is the ideal choice for all interior applications. Provides an eye-catching, easy-to-install, one-piece panel solution.

Modern, clean, contemporary and elegant design.

Slat wood wall panels are carefully designed to seamlessly transform any space, visually and acoustically enhancing the surroundings. They help create an environment that is not only quiet but also modern, soothing and relaxing.

Backing felt made from recycled materials.

Our wood is sourced and produced from certified sustainable sources, acoustic felts are made from recycled plastic bottles, and all wood is sourced from sustainable forestry, making the panels not only attractive but also environmentally friendly.

Outstanding noise reduction performance.

acoustic slat wood wall panels are the perfect solution for efficient sound absorption as well as reducing the reverberation time of noise in your space, which means they are perfect for both domestic and commercial use.

Meticulously designed hand paneling solutions.

Enhance your space with our acoustic slat wood wall panels for wall and ceiling acoustic slat paneling. The panels are made of veneer sheets with a specially developed acoustic felt base made from recycled materials. The hand-made panels are not only designed to fit the latest trends but are also easy to install on your walls or ceilings.

Designed for a quick and straightforward installation process.

---

Simply screw the panel directly into the wall through the felt acoustic backing, or if you want Class A sound absorption, you can install the panel using a baton.

## Frequently Asked Questions.

Is the panel available in a larger size?

Acoustic Range panels are only available in one size, 2400 mm x 600 mm. However, but we have designed them to seamlessly connect horizontally and vertically, so any length or width can be easily achieved.

Do you produce custom panel sizes?

We do not currently offer custom-sized panels; however, if you need a smaller size, we have designed them to be easily cut. They can also be joined together seamlessly if you need more space.

How are the acoustic panels installed?

For Class A sound absorption, we highly recommend installing acoustic wood panels with batons. However, if you want them for decorative purposes only, while still providing some sound absorption, we recommend that you use black or gray screws to screw the panels directly into the wall through the acoustic felt backing.

Can the panels be used in bathrooms or kitchens?

As long as the panels do not come into direct contact with water, these areas will not be a problem.

Can acoustic panels be used outdoors?

The Acoustic Slatwall panel series is designed for indoor use.

What surfaces can acoustic panels be installed on?

The Acoustic Lath Series can be easily installed on any flat surface, including brick, concrete and gypsum

---

board walls.

What can be installed behind the acoustic panels to increase the sound insulation?

First install the panels with batons and then apply mineral wool or any other soundproofing material between the gaps; this will significantly increase the sound absorption.

How consistent are the wood finishes throughout the panels?

Our wood is always from the same source, so the finish will always look more or less the same. However, being natural wood, knots, slight cracks and color variations may occur.

Can I hide the edges of the panels?

If you want to install a slat to one side of the acoustic panel to hide the edge, we offer separate slats.

As a professional acoustic slat wood wall panels manufacturer and supplier, we specialize in manufacturing the best quality acoustic slat wood wall panels for our customers for their interiors. We create high quality, aesthetically pleasing designs and innovative acoustic solutions to help overcome a range of noise related challenges.
