Medicilon currently features a [cGMP-based API production line](#) based on IND. From preclinical laboratory-scale testing and process development to commercialized production, we meet the needs of our clients throughout the comprehensive supply chain, including R&D, purchase and production. From the mg- and g-level to kg level, our processes allow flexible adjustments to fit in client innovative process R&D and scale production.

From QBD-oriented process design to process R&D in laboratories, commercialized production to data-based filings, our analysis and quality inspection teams promise professional services and comprehensive analytical research, including method development and verification, process verification, impurity identification and separation, API and intermediates research, and API stability tests.
