One of our key objectives is to address significant environmental challenges associated with various waste streams, such as Legacy Waste, Mining Overburden, Dredged Material, Bottom Ash Disposal, and Contaminated Soil. Through ground-breaking recycling techniques, CFlo technology enables the recovery of valuable construction materials from these waste sources, providing sustainable alternatives and contributing to resource conservation. We are heavily focused on research and development and hold several patents. The company has also been accredited by the Department of Scientific and Industrial Research (DSIR). Our advanced mineral processing laboratory, design center, and manufacturing facilities are located in Kolkata, India. We leverage these resources to deliver custom-made modular projects across the globe, catering to the specific needs of our clients.
