Crossover clamp used in aerial construction at the mid-span to clamp two ¼" strands together perpendicularly.

## PRODUCT DETAILS

[Crossover clamp](#) used in aerial construction at the mid-span to clamp two ¼" strands together perpendicularly.

## DESCRIPTION:

The clamps are is usually used hex with bolts to reinforce their grip on the strands. The bolts also guarantee the stability of the strands.

[Crossover clamps](#) are mainly used in major transmission lines and communication line installations to secure strands of wires that are c crossing each other at right angles. In doing so, they minimize the effects of wear and tear on the strands.

The crossover clamp features a galvanized finishing that gives the ultimate assurance for durability and resistance and durability. The galvanization meets the minimum ASTM specifications.

## APPLICATION:

Crossover clamps are mainly used in major transmission lines and communication line installations to

---

secure strands of wires that are crossing each other at right angles. In doing so, they minimize the effects of wear and tear on the strands. It is used with hex bolts to reinforce their grip on the strands. The bolts also guarantee the stability of the strands.

#### FEATURES:

- 1) Does not exert excess clamping pressure
- 2) Suitable for different sizes of strands
- 3) Resistant to weather
- 4) Works with hex bolts
- 5) Easy and safe to install

#### SPECIFICATION:

Material Steel

Weight 0.7 lb

Carton Quantity 50
