With offices in Dallas, Belfast, and Barcelona, Crossvale is a multinational organization that uses cutting-edge technologies and new strategies for business transformation, modernization, and easy delivery of products and services. We provide consulting, solutions, managed services, and subscriptions. Our IT consulting services can help you create an actionable roadmap and provide hands-on mentoring to implement on-prem, cloud, or hybrid IT infrastructure. The secure, scalable solutions for business efficiency include cloud infrastructure services like public cloud managed services, private cloud managed services, hybrid cloud managed services, and multi-cloud managed services. We can assist in launching your container software journey with RedHat OpenShift & OpenStack and RHEL container services. The OCP container services include standard, foundation, and enterprise containers for applications, application development, storage, and architecture systems. Through Crossvale, you can get subscriptions to the RedHat OpenShift container platform, Red Hat Ansible Automation <http://realtechpal.net/what-is-ansible-and-what-can-it-automate/>, Red Hat Enterprise Linux, and Red Hat smart management. We can scope a new capability or expand the functionality of your legacy system. After reviewing your organizational tools, we can implement a suitable CI/CD process pipeline for automating your project code quality, testing, or deployment. We can deliver projects with methodologies like Scaled Agile Framework and Iterative MVP using Scrum or Kanban processes, help create a stable environment with 24/7 support, and undertake maintenance, upgrades, and compliance measures. For more information about our services, visit <https://crossvale.com/consulting/consulting-openshift/consulting-openshift-standard/> & <https://crossvale.com/consulting/consulting-ansible/>.
