[Laminated film](#) for food packaging uses lamination technology that uses composite materials to improve strength, stability, sound insulation, appearance or other properties through the use of different materials.

PRODUCT DESCRIPTION

What is the laminated packaging films?

Laminated film for food packaging uses lamination technology that uses composite materials to improve strength, stability, sound insulation, appearance or other properties through the use of different materials. Ideal for dry food packaging and liquid applications, it creates an insulating layer that protects the product while packaging.

Laminated film for food packaging is suitable for many different markets, from pet food and frozen foods to nutritional supplements, cosmetics and cleaning products. Our laminated packaging films are customized to the specific barrier needs of your product, which will increase long-term durability and help your product resist harmful external elements while on the shelf.

Features of food packaging laminated film

1Applicable to many types of vacuum sealing machines with strong sealing.

2Safe, non-toxic, good vacuum effect, high transparency, good tensile strength and durability, easy to heat seal, good sealing, not easy to aging, etc.

3It can be used in the refrigerator and heated in the microwave oven.
