Product configurator software is an automation solution that uses parameter-driven design. It allows customers to choose certain product features defined by the business. At Prescient Technologies, we can create a complete model on the fly by entering a few key parameters. Our **Product Configurator Software** solution is based on proven and tested CAD-neutral architecture. So we can work with CAD systems such as NX, SolidEdge, SolidWorks, Creo (Pro/E), AutoCAD, Autodesk Inventor, and others.

Product Configurator software is helpful for managing thousands of your product variants, allowing your customers to configure your products and access relevant CAD data, help your sales team respond quickly to inquiries. It's a solution that helps you get more customers and dramatically increases the productivity of your sales and design teams.
