UNS S31803 Duplex Steel is used in a wide range of industries for its excellent combination of strength and corrosion resistance. This is a duplex stainless steel grade that consists of a balanced microstructure of phases that are two times stronger than any of the standard austenitic grades of steel, like 304 and 316. Reliable Steel Distributors is a leader in being one of the leading manufacturers, suppliers, stockists, and exporters of Duplex Steel S31803 pipes and tubes. Our products are trusted to be durable and to perform on top in the most demanding uses across the world.

Duplex steel S31803 is highly resistant to a wide variety of corrosive environments. Resistance to pitting, crevice corrosion, and stress corrosion cracking arises from a concentration of chromium and molybdenum combined with nitrogen in its composition.

This makes Duplex Steel S31803 Pipes & Tubes the perfect choice to withstand the acidic environments present in offshore platforms, chemical processing plants, and desalination facilities. Quality is assured with Reliable Steel Distributors, as we insist that all our range of products have the proven maximum capability of sustaining corrosion resistance that provides optimum service for longer years.
