Huiyao Laser has always been engaged in the production and sales of precision laser equipment and supporting automation as a **China laser equipment manufacturer**. It is one of the domestic excellent **precision laser equipment** and automation solution suppliers.

Huiyao Laser has the industry's more advanced precision laser equipment customization and intelligent manufacturing capabilities, comprehensive testing equipment and a complete laser processing laboratory. Our main products include: **fiber laser welding machine series**, YAG laser welding machine series, solder plastic laser welding series, dual-wavelength composite laser welding series, QCW laser spot welding series, laser cladding equipment, laser marking machine. It is widely used in power batteries, automobile manufacturing, hardware appliances, consumer electronics, optical communications and other industries.

Huiyao laser welding machine uses high-energy laser pulses to locally heat a small area of the material. The energy of the laser radiation is transferred to the material through heat, and the material diffuses inside the material after melting to form a specific molten pool. The new welding method is mainly used for welding thin-walled materials and precision parts. It can realize welding, butt welding, surfacing welding, sealing welding, etc., with high depth ratio, small weld width, small heat-affected zone, small deformation, and welding speed Fast, precise control, small focus point, high positioning accuracy, and easy to realize automation.
