Divine Metal & Alloy Stainless Steel 304 Flanges are comprised of an austenitic Stainless steel that has 18% chromium and 8% nickel in the arrangement. This organisation makes the Flanges solid and consumption safe for general destructive administrations. Divine Metal and Alloys is the main provider and maker of SS 304 Flanges in different sizes and shapes. The material is solid, with 515 MPa of least elasticity and 205 MPa of least yield strength. The material is also corrosion resistant to most atmospheric

There are various sorts, for example, the A182 F304 SORF Flange, which is a slip-on raised-face Flange. The slip-on Flanges are reasonable to be utilised with consistent Pipes to make exact association areas. The raised essence of the Flanges gives additional surface to the association, either by welding or catapulting. The SS 304 WNRF Flange is a weld-neck, raised-face Flange. The raised face helps the connection, while the welded neck gives an additional grasp to hold the Pipes in place. The Flanges change in size, going from 12 crawls to 48 crawls in breadth.
