Cast steel flanged [ball valves](#), similar to gate valves, serve as essential components in controlling the flow of media within pipeline systems. However, their key distinction lies in their closure mechanism, which uses a sphere (ball) rather than a gate. The valve body rotates around its centerline to either open or close, allowing for precise control over the flow direction and distribution. Cast steel flanged ball valves are designed primarily to cut off, distribute, and alter the flow direction of the medium within a pipeline.

In recent years, these valves have become increasingly popular due to their durability and versatility, especially in industries such as petroleum refining, natural gas extraction, coal and ore processing, and pipeline transportation systems. As vital mechanical products, they play a crucial role in production, national defense construction, and daily life. Cast steel flanged ball valves are primarily used to either block or allow the flow of media in various piping systems, ensuring that fluids are delivered to designated locations according to a predefined schedule. Their reliability and effectiveness make them indispensable in both industrial and infrastructure applications. For more know more about [China Manufacturers](#).

## SUPPLIER

China Valve Industry Co., Ltd.

**Address** NO.93, East Hubin Road, Siming, Xiamen, Fujian, P.R.China.  
**Contact Person**  
**Mobile Number** 05925819200  
**Email** [chinavalves@jeawin.com](mailto:chinavalves@jeawin.com)
